EcO Flex

EcoFlex

'A leading care chair that meets today's economic and environmental concerns of Local Authorities and the Healthcare Industry.'

The Eco-Flex has been designed to have a high degree of monetary saving over a medium to long-term period by reducing the need to purchase a wide range of different dimensional chairs.

The chair has the ability to offer total flexible dimensional movement, both in height and depth, which will reduce the requirements for stocking a large number of different sized chairs.

It's design offers alterations to the type of pressure and postural care that is required for a client and can accommodate a variety of additional pressure care products which can quickly be installed at a later date should it become necessary, dependent on the users personal requirements.

Suitable Environments

Local
Authorities

Nursing &
Residential Homes

Healthcare

1. Postural Care Management

The Eco-Flex has been designed with a Lateral back cushion as standard, offering strong postural support to meet the majority of noncritical users.

However the chair has been designed to offer modular interchangeable back cushions to meet the needs and requirements of an individual.

2.

Tilt-In-Space Action

Using a Tilt-in-Space mechanism provides a change of orientation thus redistributes pressure.

3.

Seat Height Adjustability

Alternative seat heights can be achieved on the Eco-Flex by altering the height of the glides and also by using the 1" and 2" risers supplied.

4.

Seat Depth Adjustability

Alternative seat depths are achieved by lengthening the seat box from the underneath 'turn wheels' and also by altering the position of the back frame to the second back bracket.

5.

5. Footboard Adjustability

The Eco-Flex offers a footboard adjustability of up to 2" which is achieved from the underneath 'turn wheels' of the footboard, allowing users with different leg lengths full comfort and support.

6.

Pressure Care Management

As a standard feature the Eco-Flex offers a low to medium pressure care in both the seat and footrest, which is achieved by using Reflexion Foam in the duvet cover. With the facility to remove the duvet and seat foam cushion, alternative pressure care products can be added at a later date.

7.

Moving and Handling

Where there is a requirement for transferring users the Eco-Flex is designed with two faceted arms to allow easy access with wheeled hoists.

Eco-Flex Size Availability

Size Matrix

Measurements Shown in Inches.

Seat Width (19) or (21) as standard
